Table of Contents

❶ Blocks

Three Types

❷ Lists

Bulleted and Numbered

❸ Math Mode

Example Blocks

There are a few different types of blocks.

Definition

This is an ordinary block.

Theorem

This is an alertblock.

Example

This is an exampleblock.

Itemized Lists

There are different types of lists. There are nested bullet lists:

- Item
 - Subitem
 - Subitem
- Item

There are also lists enumerated with numbers:

- ① Item
- ② Item

Math Mode

Unlike in standard Beamer presentations, anything in math mode uses serif. This means that math mode is consistent between in-presentation displays and graphics generated by TikZiT, SageMath, etc, and is also more similar to standard L^AT_EX.

$$x^2 + y^2 = z^2.$$
