

ROBIN TRUAX  
truax@stanford.edu • truax.cc

---

RESEARCH INTERESTS

---

Algebra, combinatorics, and their application to other fields in pure and applied math.

---

EDUCATION

---

**Stanford University** *2020 - 2024*

BS in Mathematics, BA in Political Science (expected). Overall GPA: 4.12. Math GPA: 4.14.  
Key graduate classes: algebra using Lang, algebraic geometry using Hartshorne, topology and geometry using Hatcher, Lee, and do Carmo, etc. Other key classes: real, complex, and functional analysis, elementary, algebraic, and analytic number theory, discrete math, theoretical CS, etc.

**University of Washington** *2019 - 2020*

Audited multiple graduate classes in abstract algebra using Dummit and Foote, Aluffi, Awodey.

**North Seattle College** *2019 - 2020*

Dual enrollment simultaneous with high school. Overall GPA: 3.96. Math GPA: 4.0. Took classes in multivariable calculus, vector calculus, linear algebra, differential equations, symbolic logic, etc.

---

RESEARCH EXPERIENCE

---

**Repetitions in the Pak-Stanley Labels** *2022*

Discovered and proved novel results on repetitions in the Pak-Stanley labels for graphs using tools from combinatorics, algebra, and chip-firing. Created computational tools for analyzing the  $G$ -Shi arrangement. Group project guided by Gordon Kirby and Susanna Fishel at ICERM.

**The Game Theory of Ranked-Choice Voting** *2022 -*

Studied voting systems using tools from social choice theory. Mathematically formalized and studied the properties of ranked-choice voting. Independent project with Avi Acharya at Stanford.

**New Proofs and Analogues of Tokuyama's Formula** *2021*

Created novel proofs at the intersection of representation theory and combinatorics. Made progress towards developing analogues of Tokuyama's Formula for other reductive groups, such as symplectic groups. Group project guided by Slava Naprienko and Daniel Bump at Stanford.

**Split Petal Projections and the Knot Determinant** *2019 - 2021*

Invented the notion of "split petal projections", a symmetric representation of knots derived from petal projections. Developed algorithms to compute the knot determinants and  $p$ -colorability of split petal projections directly from petal permutations. Independent project with Allison Henrich.

---

PRESENTATIONS AND TALKS

---

**The  $G$ -Shi Arrangement: Games on Paths, Trees, and More** *August 2022*

Summer at the Institute for Computational and Experimental Research in Mathematics

**The  $G$ -Shi Arrangement and the Three Rows Game** *July 2022*

Summer at the Institute for Computational and Experimental Research in Mathematics

**G-Shi Arrangements and Parking Functions** *June 2022*

Summer at the Institute for Computational and Experimental Research in Mathematics

**The Lindström-Gessel-Viennot Lemma: Tiling, Paths, and Determinants** *March 2022*

Stanford Undergraduate Mathematics Organization Symposium

**Locks and Learning: A Demonstration of Mathematical Storytelling** *October 2021*

Seattle Public Schools Teacher Mathematics Conference

**Towards a Tokuyama's Formula for Symplectic Groups** *August 2021*

Stanford Undergraduate Research Institute in Mathematics

**Novel Proofs of Tokuyama's Formula** *July 2021*

Stanford Undergraduate Research Institute in Mathematics

**Chip-Firing: From Algebra to Sandpiles** *June 2021*

Stanford University Directed Reading Program

**The Probabilistic Method and Sum-Free Subsets of Abelian Groups** *May 2021*

Stanford University

**How to Drive Students Away From Math: A Tutorial** *October 2020*

Seattle Public Schools Teacher Mathematics Conference

**Knot So Hard: An Introduction to Petal Projections** *February 2020*

Western Washington Community College Student Mathematics Conference

**Split Petal Projections, Knot Colorings and Determinants** *August 2019*

Summer Institute of Mathematics at the University of Washington

---

## TEACHING AND WORK EXPERIENCE

**Grader in Stanford's Department of Mathematics** *2021 - 2022*

Evaluated students in Stanford's honors math sequence (covering combinatorics, game theory, stochastic processes and Markov chains, etc.), as well as upper-division courses in graph theory.

**Community Tutor at North Seattle College** *2019 - 2020*

Tutored students in subjects ranging from basic algebra to multivariable calculus, linear algebra, differential equations, as well as computer science in both one-on-one and group settings.

**Individual Tutor** *2018 - 2020*

Privately tutored students studying calculus, preparing them to pass Advanced Placement exams. Also individually tutored college students in group theory and abstract algebra.

---

## WORKSHOPS AND CONFERENCES

**Summer@ICERM Institute for Computational Combinatorics** *2022*

The Institute for Computational and Experimental Research in Mathematics

<b>Seattle Public Schools Teacher Mathematics Conference</b> Seattle Public Schools, Virtual	2021
<b>Stanford Undergraduate Research Institute in Mathematics</b> Stanford University	2021
<b>Stanford Directed Reading Program</b> Stanford University	2021
<b>Seattle Public Schools Teacher Mathematics Conference</b> Seattle Public Schools, Virtual	2020
<b>Mathematics Online Reading Program at Harvard University</b> Harvard University, Virtual	2020
<b>Western Washington Community College Student Mathematics Conference</b> Edmonds College	2020
<b>Summer Institute for Mathematics at the University of Washington</b> The University of Washington	2019

## OUTREACH AND SERVICE

### **Reviewing for zbMATH** (*Helping index papers in knot theory and combinatorics*)

**Creating Video Math Explanations** (*Programmatically generating animations using manim*)  
Created a long-form video *The Tale of Three Triangles* explaining the convergent behavior of the Chaos Game, Sierpinski's Triangle, and Pascal's triangle colored mod 2. Recognized by math educator Grant Sanderson for narrative structure and storytelling. Also animated proofs of other results in discrete math, such as the proofs of  $R(3, 3) = 6$  and  $C_n = \frac{1}{n+1} \binom{2n}{n}$ .

### **Guest Speaker** (*Visting classes and clubs*)

Visited advanced high school math classes such as precalculus, IB Math SL/HL, AP Calculus AB/BC to discuss problem-solving and geometric reasoning. Also visited high school and middle school clubs to provide insight into what higher level mathematics looks like.

### **Leading Reading Courses** (*Teaching the art of problem-solving*)

Led a quarter-long course on The Art and Craft of Problem Solving by Paul Zeitz.
