ROBIN TRUAX

truax@stanford.edu • truax.cc

RESEARCH INTERESTS

Algebra, combinatorics, and their application to other fields in pure and applied math.

EDUCATION

Stanford University
2020 - 2024

BS in Mathematics, BA in Political Science (expected). Overall GPA: 4.12. Math GPA: 4.14.
Key graduate classes: algebra using Lang, algebraic geometry using Hartshorne, topology and geometry using Hatcher, Lee, and do Carmo, etc. Other key classes: real, complex, and functional analysis, elementary, algebraic, and analytic number theory, discrete math, theoretical computer science, etc.

University of Washington
2019 - 2020

Audited multiple graduate classes in abstract algebra using Dummit and Foote, Aluffi, Awodey.

North Seattle College
2019 - 2020

Dual enrollment simultaneous with high school. Overall GPA: 3.96. Math GPA: 4.0. Took classes in multivariable calculus, vector calculus, linear algebra, differential equations, symbolic logic, etc.

RESEARCH EXPERIENCE

Repetitions in the Pak-Stanley Labels
2022 -

Discovered and proved novel results on repetitions in the Pak-Stanley labels for various families of graphs using tools from combinatorics, algebra, and chip-firing. Created computational tools for analyzing the G-Shi arrangement. Group research project guided by Gordon Kirby and Susanna Fishel at ICERM.

The Game Theory of Ranked-Choice Voting
2022 -

Studied voting systems, using tools from social choice theory. Mathematically formalized and studied the properties of ranked-choice voting. Independent research with Avi Acharya at Stanford.

New Proofs and Analogues of Tokuyama's Formula
2021

Created novel proofs at the intersection of representation theory and combinatorics. Made progress towards developing analogues of Tokuyama's Formula for other reductive groups, such as symplectic groups. Group research project guided by Slava Naprienko and Daniel Bump at Stanford.

Split Petal Projections and the Knot Determinant
2019 - 2021

Invented the notion of "split petal projections", a symmetric representation of knots derived from petal projections. Developed algorithms to compute the knot determinants and p-colorability of split petal projections directly from petal permutations. Independent research with Allison Henrich.

PRESENTATIONS AND TALKS

G-Shi Arrangements and Parking Functions
June 2022

Summer at the Institute for Computational and Experimental Research in Mathematics

The Lindström-Gessel-Viennot Lemma: Tiling, Paths, and Determinants
March 2022

Stanford Undergraduate Mathematics Organization Symposium

Locks and Learning: A Demonstration of Mathematical Storytelling *October 2021*
Seattle Public Schools Teacher Mathematics Conference

Towards a Tokuyama's Formula for Symplectic Groups *August 2021*
Stanford Undergraduate Research Institute in Mathematics

Novel Proofs of Tokuyama's Formula *July 2021*
Stanford Undergraduate Research Institute in Mathematics

Chip-Firing: From Algebra to Sandpiles *June 2021*
Stanford University Directed Reading Program

The Probabilistic Method and Sum-Free Subsets of Abelian Groups *May 2021*
Stanford University

How to Drive Students Away From Math: A Tutorial *October 2020*
Seattle Public Schools Teacher Mathematics Conference

Knot So Hard: An Introduction to Petal Projections *February 2020*
Western Washington Community College Student Mathematics Conference

Split Petal Projections, Knot Colorings and Determinants *August 2019*
Summer Institute of Mathematics at the University of Washington

TEACHING AND WORK EXPERIENCE

Grader in Stanford's Department of Mathematics *2021 - 2022*
Evaluated students in Stanford's honors math sequence (topics included combinatorics, game theory, stochastic processes and Markov chains, etc.), as well as upper-division courses in graph theory.

Community Tutor at North Seattle College *2019 - 2020*
Tutored students in subjects ranging from basic algebra to multivariable calculus, linear algebra, differential equations, as well as computer science in both one-on-one and group settings.

Individual Tutor *2018 - 2020*
Privately tutored students studying calculus in one-on-one settings, preparing them to pass Advanced Placement exams. Also individually tutored college students in group theory and abstract algebra.

WORKSHOPS AND CONFERENCES

Summer@ICERM Institute for Computational Combinatorics *2022*
The Institute for Computational and Experimental Research in Mathematics

Seattle Public Schools Teacher Mathematics Conference *2021*
Seattle Public Schools, Virtual

Stanford Undergraduate Research Institute in Mathematics *2021*
Stanford University

Stanford Directed Reading Program   *2021*
Stanford University

Seattle Public Schools Teacher Mathematics Conference   *2020*
Seattle Public Schools, Virtual

Mathematics Online Reading Program at Harvard University   *2020*
Harvard University, Virtual

Western Washington Community College Student Mathematics Conference   *2020*
Edmonds College

Summer Institute for Mathematics at the University of Washington   *2019*
The University of Washington

OUTREACH AND SERVICE

Creating Video Math Explanations (*Programmatically generating animations using* `manim`)
Created a long-form video *The Tale of Three Triangles* explaining the convergent behavior of the Chaos Game, Sierpinski's Triangle, and Pascal's triangle colored mod 2. Recognized by math educator Grant Sanderson for narrative structure and storytelling. Also animated proofs of other results in discrete math.

Guest Speaker (*Visting classes and clubs*)
Visited advanced high school math classes such as precalculus, IB Math SL/HL, AP Calculus AB/BC to discuss problem-solving and geometric reasoning. Also visited high school and middle school clubs to provide insight into what higher level mathematics looks like.

Leading Reading Courses (*Teaching the art of problem-solving*)
Led a quarter-long course on The Art and Craft of Problem Solving by Paul Zeitz.
